MEGA TERMIX
FIPRONIL BASED ANTI TERMITE CONCENTRATED LIQUID

TECHNCIAL DATASHEET

DESCRIPTION

MEGA TERMIX is an anti-termite chemical that is both unique and effective.

MEGA TERMIX uses a combination of active ingredients with various modes of action for a unique and effective product. This combined chemistry by Control Solutions uses (25% Fipronil) and (other ingredients) for very effective termite and perimeter pest control applications.

In a nutshell, it's a mix of current chemistry and inherited knowledge from our forefathers.

ADVANTAGES

- ✓ Liquid termiticides provide immediate protection to any structure.
- ✓ Liquid termiticides are relatively inexpensive when compared to other forms of termite control.
- ✓ Liquid termiticides last for several years.
- ✓ You will do a lot to minimize the potential damage of the invasion.

EASY TO USE

It is really simple and straightforward to use.

ELIMINATOR

You can either sprinkle the powder around the affected area, or you can mix it with water and spray it into an area that you believe to be infested.

ECO FRIENDLY

Integrated pest management strategy targeted at solving pest problems while minimizing hazardous effects to people.

USES

It can be used in pre and post contruction as it will work effectively.

SPECIFICATIONS

Our primary objective is to become most preffered and desired pest control operators in Pakistan. Under t7he direction of promist Chemicals management, we continually investigate new technologies and techniques for the control of these dry wood pests. A brpad spectrum of application is study, including wood treatments, soil treatments, baiting systems, non chemical barriers and resistivity of specific materials.

Reason to choose MEGA TERMIX:
1- Lethal action on termite
2- Low soil mobility
3- Creates a non-detectable barrier
4- Remains intact for a longer time than other conventional termiticide.

5- Use for pre and post contruction treatments
6- Unique mode of action – Colonies Eliminator.
7- Toxic to mammals only if digested
8- Available in safest EC formulation.
9- Non Effective on earth worms, soild microorganism and aquatic plants
10- Environment Friendly.

TARGET PESTS

• Termites
• Bedbugs
• General Fumigation
• Wood-borer
• Mosquitoes
• Cockroaches
• Rodent / Rats
• Flies and Ants

APPLICATION

If you notice symptoms of termite presence, use MEGA TERMIX. The following are some of the most prevalent termite symptoms:
1- Small fissures and cracks near the surface of the wood, as well as tiny fecalpallets that resemble granulated sawdust.
2- From within their nest, they kick little holes.
3- Close proximity of galleries to the wood surface results in weak and porous patches that are easily penetrated.
4- The presence of earthen termite mud tubes weaving their way across the exposed region.
5- Termite Coverings are similar to mud tubes, but they cover a larger area.

HOW MEGA TERMIX WORKS:

Mega Termix is a pertoleum-based anti-termite solution that, when applied, creates a non-detectable treated zone that allows free entry of termites into the treated area, which acts as a "killing field," causing termites to stop feeding and also transmit the molecules to other colony members who are not in direct contact with the treated area, resulting in a reduction in termite population.

MEGA TERMIX Application Technique:
Termites enter through the foundation, as well as producing tiny holes in the walls and structures. To treat all termite colonies, use Promist Pro Solution. The approaches listed below can be used in a variety of situations.

MAKE MEGA TERMIX SOLUTION

Make Mega Termix solution according to the following schedule.

MEGA TERMIX Packing Size	Mix in Liter Water	Area To be Treated (Sq. Ft.)
4 L	1000 L	2160
1 L	250 L	540
500 ML	125 L	270
250 ML	63 L	135
